Allowance

1. This communication is in response to applicant's amendment filed on December 13, 2005.

2. Claims 1-5 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior art does not disclose a position sensor comprising a magnet having a longitudinal axis about which the magnet is mechanically symmetrical, a magnetic axis which deviates from the mechanical axis by an angle and a magnet holder holding the magnet in such a way that there is no angle of deviation between the mechanical and magnetic axis when viewed from above, in combination with the other features of the claim.

Furthermore, the prior art does not teach a method for manufacturing a magnetically passive position sensor in which a magnet is arranged such that it can pivot over contact spring elements aligned between end points with a step of determining the magnetic axis of the magnet and aligning the magnetic axis with the contact spring element located midway of the end points, in combination with the other features of the claim.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
